

# Architect

A Grand Design

[www.vocebonita.xyz](http://www.vocebonita.xyz)

# Ever wonder...

# does evolution

# exist?

The answer is no, evolution is not

real, it does not exist. We were all created, **all created**

**independently**, each race independently in order to

create a unique and different World, a World that could

not be created with one race. Like ingredients to an

ultimate recipe, we each group or race of people are

designed to part of a master design... a design so Grand

so Unique no one person can grasp.

... This includes architecture, music, culinary arts, spirits,

dance and movement how we interact, anything and

everything, we are going to create a unique and different World, it will happen so long as every human being is allowed to live freely. Change will happen organically.

# **Are we really Original Designs?**

There are distinct differences between all the races here on Earth. All is needed is about 10 minutes of time, mixed with critical thinking while observing imagery. Observe a few cultures some of which are neighboring and ask how did they come to be? Were they created independently or originate from one group? Observe below, was each created independently? Or one created with adaption and evolution? The answer independently.

## Africa

## India

Germany

Saudi Arabia

Russia

China

Mexico

Brazil

We are all different. There is no environmental component, weather pattern or diet that shapes an individual people over time.

Looking at the images above, you can start to think about the cultures, architecture, food and lives of the people. Each are different in their own way. Start to combine the cultures and people and you have something unique, something different, something new that the our Grand Architect or God could not create with one.

# The Existence of

# God

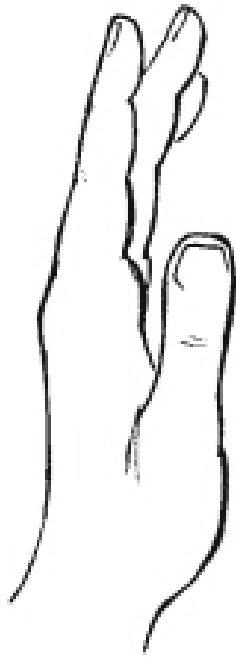

It can be proven within the definitive design in nature, and mathematics within the design.

Let's look at the aloe plant above. Do you see uniformity and the math within the design? The point of this, we were all created, all life on Earth created, no evolution.

# **Proof that we were created. Lets do an exercise...**

I want you to take a look at your hand. There is an Architect at play. Look at your hand from the side, start to wiggle your fingers and move your hand back and forth. Do this in front of a plant.

It's important that you perform this exercise next to or in front of a plant. Spend at least 15 seconds performing this exercise and ask the question while performing this, "Does the hand belong? Is the human hand foreign?"

The hand is foreign, the human existence is foreign, we all together everything human is foreign.

We did not grow or originate from Earth. We were created by God, a Grand Architect. To support the case, let's consider the single celled organism theory, that we all

originated including animal life from a single celled organism. The amount of data that would need to reside within the starting single celled organism would be very large, it is a harsh reality. In addition, it cannot be stressed enough that **life on Earth would be very very strange if evolution were true**. Evolution does not exist, we did not originate from a single celled organism.

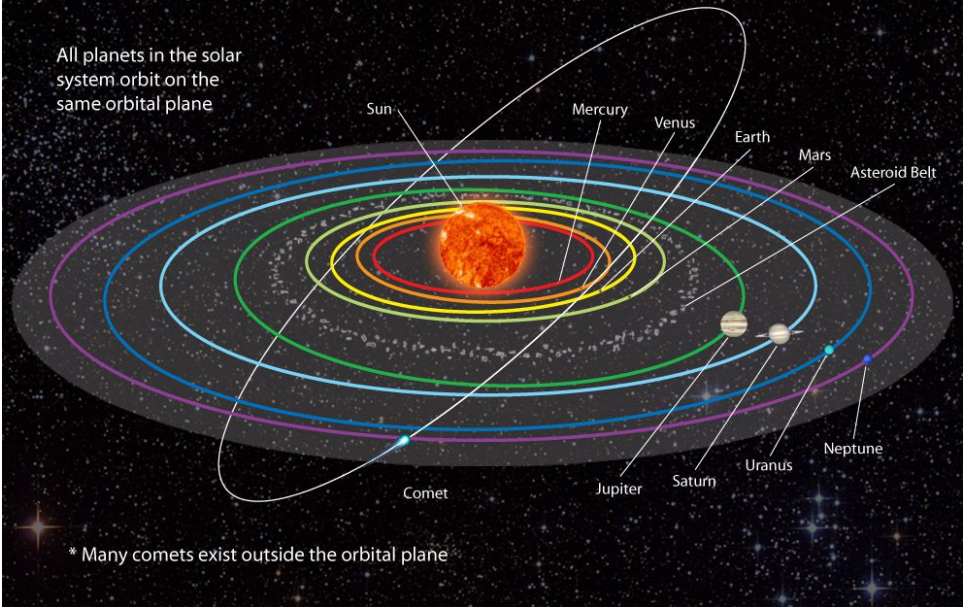

There is only so much preference data that can be stored within DNA...

# The

# Solar System...

# Orbital Plane

All planets in the solar system orbit on the same orbital plane

The solar system consists of 8 planets that orbit the Sun. These planets orbit in a horizontal fashion. While orbiting these planets tilt and rotate... its systematic, uniform in design. An Architect is at play...

## One last time...

One last time... there are differences in preferences between different races or organizations of people. If two

different races were to bare a child, the preferences for that child would be unique... a blend. He or she would have preferences from both cultures and may in turn prefer something new... again a blend. **You don't even have to believe in intercultural relationships** (I know this is touchy...) **in order to believe in the Grand design**, again blends can be something as simple as food or drink, something like Cherry Sprite or Ginger Ale with Lemonade, both can be seen as blends.

You don't have to believe in intercultural relationships, it needs to be allowed to happen naturally but not forced.

It has an opportunity of happening...

**!ඔබට ස්තූතියි**

This is “Thank you!” in Sinhala, language of Sri Lanka. It  
is probably the most interesting language of all.

Blacks before women → buy plants

Whites before women → buy plants

Sweden

France
